1. Revenue Trends

Total revenue
$21.62K

Daily Revenue Trend 2024

Monthly Revenue Trend 2024

Monthly Revenue Breakdown (Descending)

	Month	Total revenue
1.	August	$2,582.18
2.	April	$2,392.58
3.	June	$2,330.53
4.	October	$2,268.32
5.	May	$2,056.73
6.	July	$1,835.31
7.	March	$1,795.63
8.	February	$1,629.20
9.	December	$1,519.02
10.	January	$1,163.71
11.	November	$1,120.25
12.	September	$730.36

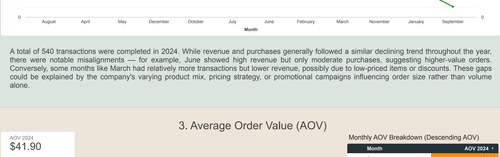
Total revenue for **2024** was **$21,623.81**, with the highest monthly revenue in **August ($2,582.18)** and the lowest in **September ($730.36)**.

While beach volleyball in Australia is typically more active during the November–March season, this year's data shows peaks in April, June, and August, suggesting possible off-season programs and may relate to training signups for tournament prep. Since this analysis is based on a single year, it's difficult to determine consistent seasonal trends. A clearer picture would require comparing performance across multiple years to confirm whether these peaks reflect a pattern or one-off events.

2. Transactions & Monthly Trend

Purchases
540

Purchases vs Revenue Patterns

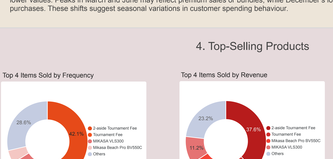


A total of 540 transactions were completed in 2024. While revenue and purchases generally followed a similar declining trend throughout the year, there were notable misalignments — for example, June showed high revenue but only moderate purchases, suggesting higher-value orders. Conversely, some months like March had relatively more transactions but lower revenue, possibly due to low-priced items or discounts. These gaps could be explained by the company's varying product mix, pricing strategy, or promotional campaigns influencing order size rather than volume alone.

3. Average Order Value (AOV)

AOV 2024
$41.90

Monthly AOV Trend 2024



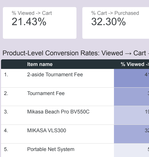
Monthly AOV Breakdown (Descending AOV)

	Month	AOV 2024
1.	September	$66.93
2.	March	$49.67
3.	June	$47.13
4.	October	$46.03
5.	July	$44.21
6.	February	$40.52
7.	May	$39.63
8.	April	$39.06
9.	August	$38.87
10.	January	$38.75
11.	November	$35.41
12.	December	$28.70

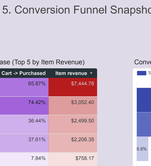
The average order value (AOV) in 2024 was $41.90, fluctuating throughout the year. September had the highest AOV at $66.93 but the lowest total revenue, indicating fewer high-value purchases. In contrast, April had high revenue but a mid-range AOV, suggesting higher purchase volume at lower values. Peaks in March and June may reflect premium sales or bundles, while December's low AOV likely results from discounts or small-item purchases. These shifts suggest seasonal variations in customer spending behaviour.

4. Top-Selling Products

Top 4 Items Sold by Frequency



Top 4 Items Sold by Revenue



Top 5 Best-Selling Items (Descending Revenue)

Item name	Items purchased	Average Revenue	Item revenue
2-aside Tournament Fee	241	30.82	$7,444.75
Tournament Fee	98	31.15	$3,052.40
Mikasa Beach Pro BV550C	30	83.31	$2,499.50
MIKASA VLS300	40	55.09	$2,206.35
Portable Net System	2	379.09	$758.17

The top-selling products in 2024 were dominated by tournament-related fees, with the 2-aside Tournament Fee and Tournament Fee accounting for 59.2% of total units sold and 53.1% of total revenue. The Mikasa Beach Pro BV550C and MIKASA VLS300 volleyballs also contributed significantly, especially in revenue due to their higher average prices ($83.31 and $55.09 respectively). Notably, the Portable Net System, though sold only twice, generated $758.17, indicating high-value but low-frequency purchases. These insights show that while volume is driven by event fees, revenue is also supported by premium equipment, suggesting a diverse pricing strategy targeting both regular players and committed customers.

5. Conversion Funnel Snapshot

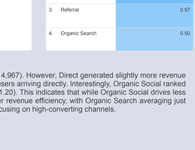
% Viewed -> Cart
21.43%

% Cart -> Purchased
32.30%

Product-Level Conversion Rates: Viewed → Cart → Purchase (Top 5 by Item Revenue)

	Item name	% Viewed -> Cart	% Cart -> Purchased	Item revenue
1.	2-aside Tournament Fee	41.86%	65.87%	$7,444.75
2.	Tournament Fee	34.6%	74.42%	$3,052.40
3.	Mikasa Beach Pro BV550C	19.06%	36.44%	$2,499.50
4.	MIKASA VLS300	32.42%	37.61%	$2,206.35
5.	Portable Net System	5.86%	7.84%	$758.17

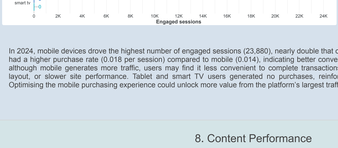
Conversion Rate Funnel: Viewed → Cart → Purchased



In 2024, 21.43% of viewed items were added to cart, and 32.30% of those were ultimately purchased. Product-level data reveals strong performance for tournament-related services, with the Tournament Fee converting 34.6% of views to carts and 74.42% of carted items to purchases. In contrast, high-value physical items like the Portable Net System and volleyballs had lower conversion rates across both stages, indicating possible friction due to price sensitivity or lower urgency. This pattern is further supported by the funnel chart, where only 6.8% of all viewed products were eventually purchased, highlighting a significant opportunity to improve early-stage engagement and drive more users from consideration to checkout.

6. Channel Performance

Channel Performance



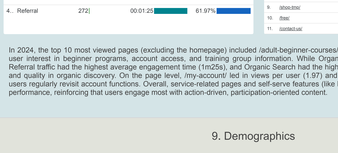
Average Channel Revenue Per Session

	Channel	Revenue Per Session
1.	Organic Social	1.42
2.	Direct	0.72
3.	Referral	0.57
4.	Organic Search	0.50

In 2024, Organic Search generated the most sessions (19,224), followed by Direct traffic (14,967). However, Direct generated slightly more revenue than Organic Search ($9,779.87 vs $9,507.64), suggesting higher purchase intent among users arriving directly. Interestingly, Organic Social ranked third in revenue despite far fewer sessions, resulting in the highest revenue per session ($1.20). This indicates that while Organic Social drives less traffic, it attracts highly engaged users. In contrast, Referral and Organic Search had lower revenue efficiency, with Organic Search averaging just $0.50 per session. These results highlight the importance of not just attracting traffic, but focusing on high-converting channels.

7. Device Performance

Device Performance



Average Device Revenue Per Session

	Device category	Purchases per Session
1.	desktop	0.018
2.	mobile	0.014
3.	tablet	0.000
4.	smart tv	null

In 2024, mobile devices drove the highest number of engaged sessions (23,880), nearly double that of desktop (11,992). Despite this, desktop users had a higher purchase rate (0.018 per session) compared to mobile (0.014), indicating better conversion efficiency on desktop. This suggests that although mobile generates more traffic, users may find it less convenient to complete transactions — possibly due to checkout friction, screen layout, or slower site performance. Tablet and smart TV users generated no purchases, reinforcing the dominance of mobile and desktop. Optimising the mobile purchasing experience could unlock more value from the platform's largest traffic source.

8. Content Performance

Channel-level Content Performance

	Channel	Sessions	Average engagement time	Engagement rate
1.	Organic Search	19,224	00:01:15	62.07%
2.	Direct	14,967	00:00:56	50.42%
3.	Organic Social	1,548	00:00:47	56.7%
4.	Referral	272	00:01:25	61.97%

Top 11 Page-level Performers (Descending Views)

	Page path	Views		Average session duration...
1.	/	26,411	1.33	00:00:18
2.	/adult-beginner-courses/	13,259	1.41	00:00:48
3.	/my-account/	12,662	1.97	00:00:49
4.	/squads/	10,177	1.62	00:00:47
5.	/social-tournaments/	4,301	1.38	00:00:34
6.	/manly-beach-volleyball/	2,921	1.25	00:00:21
7.	/social-events-manly/	2,524	1.42	00:00:45
8.	/book-court/	2,248	1.37	00:00:33
9.	/shop-tmp/	2,215	1.54	00:00:29
10.	/free/	1,938	1.41	00:00:15
11.	/contact-us/	1,816	1.4	00:00:45

In 2024, the top 10 most viewed pages (excluding the homepage) included /adult-beginner-courses/, /my-account/, and /squads/, indicating strong user interest in beginner programs, account access, and training group information. While Organic Search drove the most sessions (19,224), Referral traffic had the highest average engagement time (1m25s), and Organic Search had the highest engagement rate (62.07%), showing depth and quality in organic discovery. On the page level, /my-account/ led in views per user (1.97) and had strong average session time, suggesting users regularly revisit account functions. Overall, service-related pages and self-serve features (like booking and account tools) show the strongest performance, reinforcing that users engage most with action-driven, participation-oriented content.

9. Demographics

Gender Performance Breakdown

	Gender	Total revenue	Users	Revenue per User
1.	unknown	$13,131.29	26,135	$0.5
2.	male	$3,305.01	3,289	$0.94
3.	female	$3,030.08	3,343	$0.83

Age Performance Breakdown

	Age	Total revenue	Users	Revenue per User
1.	unknown	$13,567.62	26,668	$0.71
2.	25-34	$2,556.79	2,006	$1.27
3.	18-24	$1,161.23	1,536	$0.75
4.	35-44	$1,033.36	1,156	$0.89
5.	45-54	$657.3	845	$0.78
6.	55-64	$331.45	330	$1
7.	65+	$158.64	226	$0.7

In 2024, demographic data was mostly marked as 'unknown', accounting for over $13,000 in revenue across both gender and age segments — limiting precise targeting. Among known users, males generated slightly more revenue per user ($0.94) than females ($0.83), though both groups contributed similar total revenue. In terms of age, the 25–34 group performed best, generating the highest revenue per user ($1.27) and strong total value despite fewer users. Older cohorts (55–64) also showed strong revenue efficiency ($1.00/user), suggesting potential value in retention or re-engagement strategies for that audience. These insights highlight the need to improve demographic tracking while tailoring campaigns to high-performing age groups like 25–34.

10. Key Insights & Recommendations

In 2024, BeachVolleyball.com.au generated $21,623.81 across 540 purchases, with revenue peaking in August and dipping in September. Most revenue came from tournament-related fees, which accounted for over 75% of total sales. The average order value (AOV) was $41.90, with spikes in September and March, suggesting bundled purchases or premium items. However, the conversion funnel showed early drop-off — only 21.4% of viewed items were added to cart, and just 6.9% of views converted to purchases.

Organic Search brought the most traffic, but Direct and Organic Social delivered higher revenue per session. Mobile devices contributed twice the sessions of desktop, but converted less efficiently. Demographic data was largely incomplete, but users aged 25–34 showed the highest spend per user.

Recommendations:

1) Streamline mobile checkout: Simplify forms (e.g., autofill fields, guest checkout), reduce page load times, and add trusted mobile payment options (e.g., Apple Pay, Google Pay) to boost conversion on mobile.

2) Introduce cart abandonment emails: Use GA4 and Shopify triggers to send personalised reminders within 24 hours, offering limited-time discounts or highlighting low stock.

3) Promote bundled packages: Create fixed product bundles (e.g., "Tournament Starter Pack" including fee + ball) to lift AOV during off-peak months.

4) Invest more into Organic Social channels: Boost posts featuring top-converting products and retarget past website visitors using Meta Ads Manager, focusing on the 25–34 demographic.

5) Improve demographic tracking: Encourage account logins at checkout with incentives (e.g., $5 off first purchase), and enable enhanced measurement in GA4 to fill in missing gender and age data.
